**HOW TO USE**
To promote an adequate bond, the two surfaces must be clean and dry; clean with Dow Corning cleaning agent. Low temperatures at the time of application may increase the possibility of condensation on the surface, which could reduce the final bond strength.

The adhesive is pressure sensitive, we therefore recommend the application to be carried out at a minimum of 5°C with as high pressure as your process allows (minimum of 1 Bar pressure is recommended).

For more detailed information on how to apply and quality control procedures please consult [www.dowcorning.com/PanelFix](http://www.dowcorning.com/PanelFix) for more information.
